

Seen in the best light: Global platform for major projects.

Presenting some of the most celebrated lighting projects: business centres, office buildings, and structures. Be inspired.

SEE THE WORLD IN A NEW LIGHT

OSRAM

OSRAM CASE STUDIES

A basis for ideas

There have been numerous lighting projects that have caught the imagination recently such as the Allianz Arena in Munich, Taipeh 101 Financial Tower in Taiwan, Tate Modern Bridge in London and the Old State House in Boston. They all have one thing in common – brilliant modern OSRAM technology.

A platform for professionals

We are constantly being asked for information about OSRAM projects. People want to know more about partners and products, technical solutions, details, design and construction. This has prompted us to create a new internet platform so we can present a selection of projects to a global audience. You can take a look at some exemplary lighting projects from around the world by going to the **OSRAM Case Study** link on the international OSRAM homepage **www.osram.com** and the national home pages. This is the perfect way to obtain instant professional answers to all your questions.

Research made easy

You can quickly and easily find reference projects with the help of an integrated professional search machine. By selecting different search criteria such as application, year, continent, country or product you can display detailed information on your screen in seconds. Or if you prefer, you can find the projects on an interactive map.

All the details

For every reference project you will find details of the products used by following a link to the datasheets. Every partner company involved in every project (luminaire manufacturers, lighting designers, architects and so on) has a link that will take you to their home page. We hope you'll visit the OSRAM case studies soon at: <http://www.osram.com/casestudies>.
