

Lighter, brighter, cooler – the new OSRAM aluPAR with aluminium reflector!

WINNER OF THE
PLASA
2005 AWARDS FOR INNOVATION

Make way for the future star on all “halogen stages”. The new OSRAM aluPAR™ has an aluminium reflector instead of the usual glass reflector. This reduces the weight of the lamp by 66%. In terms of light, the aluPAR™ also steals the show from conventional PAR56 lamps and shines up to 10% brighter. For further brilliant halogen performances go to: www.osram.com
